

EziSYSTEM

Service and Calibration Rig

As a major user of cable locators I am sure you are aware of the considerable cost and inconvenience of maintaining your fleet. Not only do you have the actual cost of service and recalibration together with transportation charges to and from your chosen repair house but, perhaps even more significantly, you have all of your equipment out of action for probably a minimum of 2 weeks each time an item needs an annual service. On top of that this equipment is used in harsh conditions and all the above costs are increased by the additional requirement for repairs, which are the inevitable result.

Over the past months Cable Detection Ltd has made major investments in the development of the EziSystem range of cable locators. This investment has led to many benefits for the actual user of the products, but we consider the requirements of a manager of a fleet of instruments to be equally important. As a result we have designed our products within a framework created to allow us to extend full service facilities to major users without compromising on quality.

Our patented EziSystem Service and Calibration Rig allows you to service and repair your own fleet of EziSystem products to the standard we would work in our own workshops. The system provides software control of the conformity and calibration procedures and full traceability to the manufacturer's processes. In fact the system is used in our production facilities to set the original calibration.

The EziSystem Service and Calibration Rig is suitable for use in a normal workshop environment and will fit comfortably onto an average sized workbench. You do not need to bury any cables to set yourself up to use this system. We will install the system into your company and give you full training on how to use and maintain the product.

So in addition to user benefits a change to the EziSystem will deliver the following Key Business benefits to your company:

- Elimination of External Service Charges
- Reduced Freight Costs
- Reduced Administration Costs
- Increased Utilisation
- Increased Control and Visibility

Please do not hesitate to contact us if you want to hear more or organise a demonstration.
